How to make sure .NET Framework 3.5 is installed in Windows 7/8/8.1? ....................................... 13
Install .NET Framework on Windows 2K12/2K12 R2 Server

1. Click **Server Manager** icon available in the task bar. Server Dashboard displays.

2. Select **Add roles and features**.

   Add Roles and Features Wizard displays.
3 Click Next >.

Select Installation Type window displays.
‘Role based or feature based selection’ option is selected by default. You can select the installation type as per the requirement.
4 Click **Next >**.

Select destination server window displays.
5. Select Local Server from the server pool, and then select **Next**.
6. In Select server roles pane, click Next >.
7 In **Select Features** pane, expand **.NET Framework 3.5 Features**, select **.NET Framework 3.5** (includes **.NET 2.0 and 3.0**).

**Figure 6**

8 Click **Next >**.
9 Select **Restart the destination server automatically if required** option, to restart the server once the installation is complete.

10 Click the **Install** button.
Install .NET Framework on Windows 2K8 and 2K8 R2 Server

1. Open the Server Manager.
2. Click Features on the left pane.
3. Click Add Features on the Features Summary pane.

   ![Figure 8](image)

Add Feature Wizard displays.

4. Expand .NET Framework 3.5.1 Features, and then select .NET Framework 3.5.1 option.
5 Click **Next >**.

Add Features Wizard displays the Confirm Installation Selections window.
6 Click the **Install** button.

Add Features Wizard displays the successful installation message.
7 Click Close, and then close the Server Manager.

How to make sure .NET Framework 3.5 is installed in Windows 7/8/8.1?

**NOTE:** Make sure that all the Windows Updates are up-to-date.

For **Windows 7**, 

- Go to Start> Control Panel> Programs and Features.
- Click Turn Windows Feature on or off.
  The Windows features dialog box displays
• Click the Checkbox for Microsoft .NET Framework 3.5.1.
• Click OK.

For Windows 8 and 8.1,
• Go to Search and type “Control Panel”.
• Click the option Turn Windows Feature on or off in the Control Panel.
• Enable the .NET Framework 3.5 option.
• Click OK.
